Tom, I hear you and I agree, sort of. I'm one of those old timers but
I've never been enamored of code. Yes, I have an extra class license,

but CW is not my favorite mode. I use it to chase some DX now and then but my real love is RADIO. The mode is beside the point.

To understand what's going on you really need to know where the old timers are coming from. It's not CW, it's not phone, it's not packet. What it is is the special status of being a licensed radio operator. Those of us who have been in the hobby many years have a love for it that goes back before the days of quick and easy licenses, and we don't much like what's happened beginning with the CB mess and just getting worse since. Turn your nose up if you will, but there are those of us who think that having a license to transmit should be evidence of a strong desire to learn about radio and all that goes with it. Personally, if they want to eliminate the CW requirement that would be fine with me. But I would like to see the FCC require some showing of real dedication to the art and science of RADIO and not just the desire to yak on the air. For chit-chat, the telephone works fine, maybe better. Or the Internet, for heaven's sake. An Amateur Radio license should be issued only to people who are interested in radio itself.

Flame deflectors are on...
